RGV Renewable Department Solar & Heat Pump Specialist

RGV Engineering Ltd has an extremely well respected and established Renewable Department fully Micro Certification Scheme – MCS accredited for all renewable services of heating including providing the necessary back-up for all Government-backed schemes such as the Renewable Heat Incentive – RHI and Solar PV Feed In Tariff – FIT.

Our Renewable Department offers the following services:

- GSHP installation
- ASHP installation
- Solar PV installation
- heat pump/boiler installs
- domestic projects
- commercial projects,
- MHR&V (Mechanical Heat Recovery and Ventilation)
- underfloor heating (wet and dry)

Government increases funding by nearly 40 per cent

The Government-funded Renewable Heat Incentive (RHI) is set for a near 40 per cent increase in payments to domestic consumers from April it was announced recently. Ground and air source heat pumps as an alternative to gas, oil and LPG boilers are becoming more and more popular due to the fact that they are cheap to run, require minimal maintenance and attract Government “clean energy payments” over the seven-year duration of the scheme. Mark Chalke, a director of RGV Engineering Ltd, commented: “Over the last few years, we have recognised the need to provide our customers

with renewable energy options which includes heat pump and solar energy technologies and this has enhanced our core business dramatically.”

He added: “We partner international brands such as Mitsubishi and Panasonic which reflects the training and skills resources we have invested in as a company to deliver sustainable heating and electrical solutions to our customers. From April this year, consumers will be paid 10.2 pence for every kilowatt of energy produced by the heat pump which can run into thousands over the life of the scheme

and this, together with much lower running costs and CO2 emissions, means a cleaner, greener alternative to traditional gas and oil boilers. RGV Engineering Ltd is well known and established in the locality for electrical, plumbing and heating services.

Activities range from the simple servicing of a domestic boiler up to and including electrical and mechanical contracts worth in excess of £1 million. For further information on how much you might be entitled to via various Government initiatives available, please call us on 01980 670667.
